

# Your Sociology Journey

## Further & Higher Education

The knowledge and skills that students acquire in KS4/5 Sociology form a secure foundation for degree-level study. Critical thinking, logical analysis of research, independent learning, and the ability to analyse and evaluate theories are invaluable skills in any degree. Sociology prepares students particularly well for degrees in Sociology, Psychology, Politics and Social Anthropology. Degrees in Health & Social Care, Business, Law and creative subjects are very compatible as well, and links with History and Philosophy & Ethics are also plentiful.

## Careers

Sociological knowledge can be used across multiple sectors, from politics to social welfare. One Sociology graduate even became President of the United States. Potential careers include policing and crime, law, social and health care, management, market research/business, teaching, data analysis, working with children and young people, international aid and development, and HR.
